

British Airports Authority

CT Glass provided glazing for a glass office partitioning system for BAA.

## Background

A leading partitioning system specialist approached CT Glass to create bespoke glass panels for a partitioning system to be incorporated into BAA's office refurbishment on North Perimeter Road, London.

## Project Information

The brief demanded that the panels needed to interlock with the client's chosen specialist partitioning system.

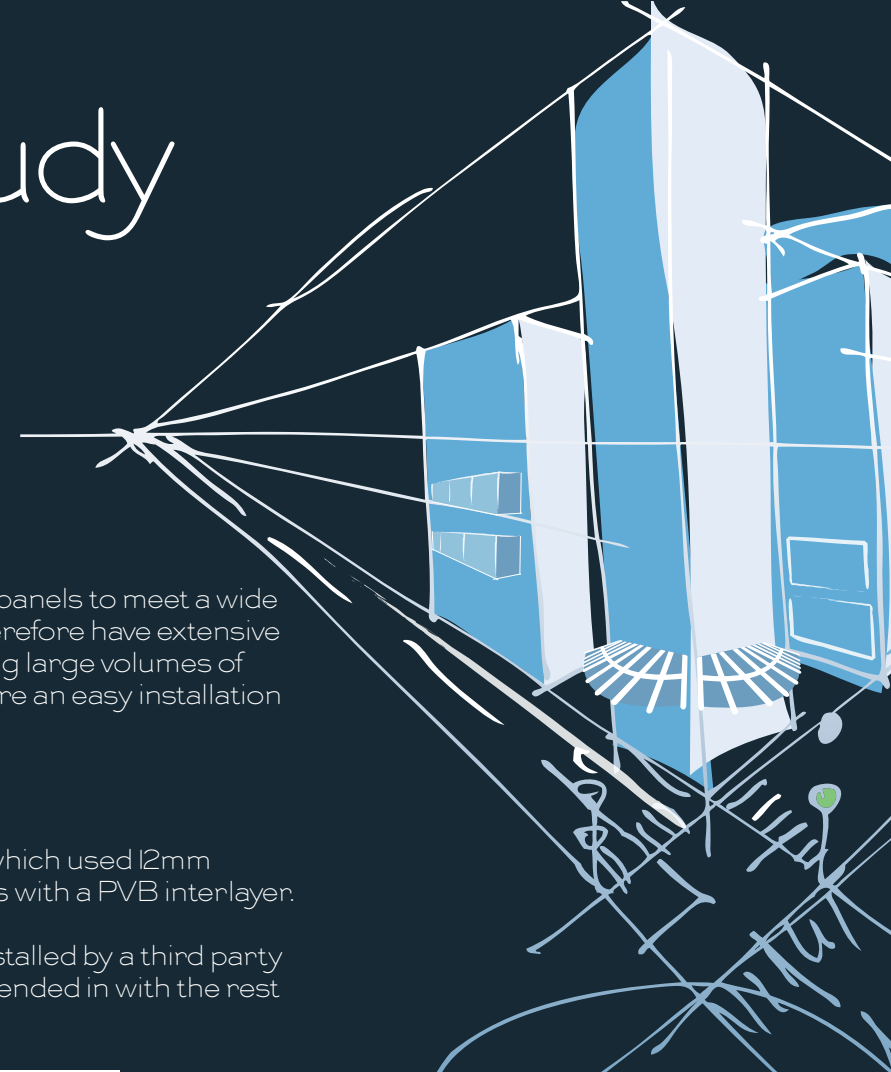

## Why CT Glass?

CT Glass provide glazed partitioning panels to meet a wide range of partitioning systems and therefore have extensive experience and capability in producing large volumes of panels to exact specifications to ensure an easy installation process.

## Results

The result was a dual glazed system which used 12mm toughened and 12.8mm acoustic glass with a PVB interlayer.

The unique piece was successfully installed by a third party into the refurbishment project and blended in with the rest of the interior as specified.
